PROFESSIONAL PROFILE

Computer Engineer focused on mobile and web frontend development, with experience in native and hybrid applications (Flutter, React, Android, iOS) and backend services in Node.js and TypeScript. I currently build internal platforms on the Innovation team at Grupo Batta, serving more than 100 offices nationwide. I am motivated by projects where code solves measurable, operationally impactful problems — not just technical demos.

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer · Grupo Batta

Innovation Team · Torreón, Coahuila · October 2025 - Present

- Build the cross-platform queue-management app in Flutter, deployed across 100+ credit offices nationwide, handling an average of 140+ daily tickets in the busiest branches.
- Designed and implemented a smart prioritization algorithm that reorders the service queue in real time based on customer experience and branch operations, cutting wait times for critical services by at least 18% versus the previous .NET platform.
- Implemented five role-specific interfaces: ticket kiosk, public calling display, teller console, supervision panel and corporate executive dashboard, integrated with a real-time analytics module with per-branch and per-teller metrics.
- Own the product frontend and contribute to the backend (Node.js, TypeScript) and authentication (Firebase), integrating with SQL Server through REST APIs and managing local SQLite persistence for syncing with the central database.

Web Developer · Grupo Universal Gas

Saltillo, Coahuila · 2024

- Built an administrative web system for internal purchase orders and equipment inventory, replacing a previously manual workflow.
- Cut order-management time by 40% by digitizing the operational process.
- Administered and configured Linux servers to improve platform stability and uptime.

EDUCATION

B.Eng. in Computer Engineering · Instituto Tecnológico Superior de la Región de los Llanos · Durango, México

Graduated February 2025 · Specialization in Data Science · Professional License: 15142663

PERSONAL PROJECTS

HydroSense

2024

Android app connected to IoT sensors for real-time data visualization and analysis, with offline storage via Room Database.

Kotlin, R, Room, Volley, Gson, AndroidChart

Zoop

2023 - 2024

Android app for finding local services, with authentication and secure data management via Firebase. Published on Google Play.

Android Studio, Kotlin, XML, Firebase

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, Kotlin, Java, Android, iOS, Android Studio, Hilt, Room

Backend: Node.js, Express, PHP, REST APIs, Server-Sent Events

Cloud & Tools: Firebase, Git, Linux server administration

Web Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS

Databases: SQL Server, PostgreSQL, MySQL, SQLite, MongoDB

UI/UX Design: Figma, Adobe Photoshop, Adobe XD
